

## Test Document for PDF Bot

This is a sample PDF document for testing the PDF Bot application.

It contains multiple paragraphs of text that can be used to test the document parsing and knowledge base functionality.

### Key Features:

1. PDF upload and parsing
2. Vector embedding generation
3. Semantic search capabilities
4. Chat-based question answering

This document can be used to test how the system processes PDF files and makes their content available for querying.

The text should be chunked, embedded, and stored in the PostgreSQL database with pgvector for semantic search.
